The Monza LP Stabilizer Grand Prix Technology for Your Valued Vinyl

Furutech Co., Ltd., manufacturer of refined analog and digital audio and video cable and accessories, is delighted to unveil their new Monza LP Stabilizer; Pure Transmission technology for your valued vinyl.

La Grande Épreuve

Grand Prix racing's single focus: Testing the absolute limits of technology and performance for that final 10th of a second that makes the difference between victory and also-ran. Furutech builds each and every cable in their line the same way; optimized engineering solutions applied to advanced materials and processes, backed by utterly meticulous build quality.

The beautifully finished precision machined nonmagnetic stainless steel base and top modules are separated by a layer of damping carbon fiber. The bottom surface is covered with 16 concentric cushioning grooves made of an extremely effective Piezo Electric damping material.

Available: Now!

The Piezo Effect and Your Valued LPs

The bottom layer of the LP Stabilizer is made of an extraordinary piezo electric damping material. It was developed for the Innovations award-winning FI-50 connector series. In that "active technology" system Furutech engineers created a unique material comprised of nano-sized ceramic particles and powdered carbon. Nano-ceramics couple with carbon powder creating the piezo effect. Nylon and fiberglass are added in the connector, and the whole forms an extremely effective mechanically *and electrically* damped matrix.

Piezoelectric effects are the key. The nano-polycrystalline ferroelectric ceramic particles exhibit *electro-generative* properties (mechanical pressure creates an electrical charge) and the carbon

powder exhibits *thermal-conductive* characteristics. The mechanical and electrical damping effects occur while “interconverting” thermal, mechanical, and electrical energy.

Mr. Graeme Coley, special assistant to Mr. Frank Yoo, VP of Furutech, picks up the narrative: “We took our piezo electric material and worked it into a resonance-absorbing pad for the bottom surface of the Monza LP Stabilizer. We tested many different materials, weights, flat and ridged piezo electric and other damping materials before settling on a pad of our piezo electric resonance material with concentric ridges bonded to a stainless steel and carbon fiber body.”

Furutech attribute the improvements made by the Monza LP Stabilizer—more focused bass, an unrestrained, dynamic midrange, and sweet, extended highs—to its resonant signature on vinyl produced by its careful balance of materials and overall weight.

Furutech was honored with a Best of Innovations 2009 award for what may be the most sophisticated and thoroughly engineered AC connectors in the world, the FI-50 Series, now standard equipment on the Furutech Piezo Powerflux AC cord.

Furutech make other award-winning analog accessories like the DF-2 LP Flatteners, the celebrated DeMag, the DeStat, the SK-II LP Brush, and the Ag-12 Phono Cable of which Michael Fremer recently wrote: “The award for best performance and highest build quality at the lowest price goes to the Furutech AG-12.”

Furutech's Evolution Series was
awarded The Absolute Sound
Editors' Choice Award in both
2007 and 2008

About Furutech

Furutech makes a wide variety of high performance 15A and 20A A/V cable and power connectors and parts, as well as distribution/filtering products like the new 120Hz standard xv1.3 HDMI cable, Ag-12 Silver Tonearm Cable, Pure Power 6, e-TP4+4, e-TP609 and e-TP60 Power Distributors, and e-TP80 Power Filters, deMag Disc and Cable Demagnetizer, the deStat, a fan-driven, Balanced Ion Drive device for totally eliminating static from LPs and CDs, DF-2 LP Flatteners, lightweight and stylish FRD Room Diffusion Panels, PC-2 Disc Pure Cleaner, and their own very special NANO Liquid Contact Enhancer, plus even more fine cable and OEM products.
